From M.L. RUTHRAUFF - CORPORATE SAFETY AND HEALTH - BARBERTON
Subj. COORDINATION OF EPA, DOT, AND SAFETY REGULATION

File No.
or Ref.

Date

FEBRUARY 1, 1980

There is an acceleration of Government regulation in the subject areas. The current National and Governmental interest in real, potential, and alleged environmental and health hazards has produced a backlog of Federal and State statutes. The agencies are now charged with implementation of these laws. In many cases, implementation timetables have been set by the statutes. The net effect of these activities are overlapping and confusing requirements.

The Corporate Safety and Health office, with an increased staff, intends to provide substantial coordination and assistance to Company locations. In line with this effort, regulatory outlines and current status evaluations are being prepared for circulation to key personnel dealing in these matters throughout the Company. These guides will reflect the impact of different and overlapping regulations upon Company compliance responsibility. The outlines are designed to be followed as a matter of policy. However, we expect that interpretations will, in some cases, not apply to every location or State.

It is important that a free discussion and exchange of information is established between our office and the respective coordinators at the Company locations. This working relationship is especially important between our office and assigned Division and State coordinators. We ask that coordinators review, with us, any problem with Corporate regulatory outlines before taking an independent position.

It is also requested that all contacts with EPA, DOT, and OSHA be coordinated through the Corporate office. We should be included on any exchange of information between Company Divisions relating to regulatory interpretation and problems, and we should also be copied on correspondence relating to the subject regulations.

The Corporate office will make every effort to coordinate our visits and reviews of Company locations with responsible Division and State coordinators, as well as the interested personnel at the location.
