You should now have or soon receive samples of amorphous polypropylene from Eastman and Avisun.

Please determine if Montars 1, 5 and 9 and Aroclors 1268, 4465, 5060, 5442 and 5460 are compatible at 10, 20 and 50% in these resins.

These amorphous polypropylenes are used in hot melt adhesives, and I want to determine if Montars (cost) and Aroclors (better tackiness, etc.) can bring anything to the party.

Could we have an answer on this by May 31, please.

Thank you.

Cumming Paton

CP:dbw

P. S. - I am sending literature on Eastman's and Avisun's products.
