Re: Calvert Cliffs Nuclear Power Plant
Subcontract 6750-M-338
Thermal Insulation

Gentlemen:

We propose to use the following pipe insulation on the above project, in lieu of the calcium silicate that is specified in 6750-M-338:

Class V Piping 126° - 350° F - Owens-Corning One-Piece Fiberglas (450° F) Pipe Insulation.

Class IV Piping 351° - 550° F and Class III Piping 551° - 700° F - Forty-Eight Insulation M.F. Mineral Fiber (1200° F) Pipe Insulation.

Our reasons for the above changes were explained to you in a letter dated December 16, 1971. These problems were also discussed at our meeting with Bechtel Associates and Baltimore Gas and Electric Company on January 10, 1972.

We are submitting the attached unit prices in accordance with the revised insulation thickness schedule. The table of units for pricing fittings is the same as the one on page 27 of Subcontract 6750-M-338. There is no increase or decrease in the units that are in effect now, but there are additional prices that were not previously listed because of the revised schedule.

Our manufacturers have assured us that their products can be certified to the specifications. We hope that the attached data will supply you with the necessary information.

Hoping the above meets with your approval, we remain,

Very truly yours,

Thomas L. Allen
