Confirming our telephone conversation, and effective today, only the gaseous HCl produced as a by-product of chlorobenzene manufacture is to be used in the production of aqueous muriatic acid for sale.

Gaseous HCl from the chlorophenol and Aroclor departments is to be used in the manufacture of chlorosulfonic acid. Any excess is to be drowned in water and sewered.

This decision has been reviewed with both Assistant General Managers and has their approval. No changes shall be made in this policy without their approval.

Inasmuch as the muriatic acid absorption facilities are operated by Jim Dalton, I would like a confirmation from him when the necessary piping change or other modifications have been made and the policy outlined above has been implemented. I will expect Jim to police the system to be sure that no chlorophenol or Aroclor gas is going to the muriatic acid absorber.
