

ETHYL CORPORATION OF CANADA LIMITED

Memorandum of
Telephone Contact with Deputy Minister of Health
St. John's, Newfoundland
27 January, 1960

Subject: HIGHER TETRAETHYL LEAD CONTENT IN MOTOR FUEL

While in Halifax, confirming arrangements made by previous correspondence, Dr. Leonard A. Miller, Deputy Minister, Department of Health of Newfoundland, was contacted by telephone. He had been previously sent U.S. Public Health Service Bulletin #712, "Public Health Aspects of Increasing Tetraethyl Lead Content in Motor Fuel".

Dr. Warren discussed the industrial hygiene activities of the Company in the past and our method of supervising the product in automotive and aviation fuel.

Dr. Miller did not express any particular concern but was interested in knowing where tetraethyl lead would be added and if there were any changes proposed in present methods of handling. It was explained that the Ethyl fluid would only be added at refineries and that there would be no changes in our industrial hygiene program.

It was felt that our purpose was served by this conversation following our original communication.

Douglas R. Warren, M.D.
