Subject: Control of Asbestos in Atmosphere

Attached is a technical report on the Control of Toxic Substances in the Atmosphere from the Organization for Economic Co-operation and Development (OECD). This report represents an assessment of previously developed literature addressing the environmental impact of asbestos.

The report is an excellent primer on the asbestos impact upon the environment, with chapters on mineralogy, measuring methods, asbestos emissions, asbestos in ambient air, health effects, national standards and control technologies and costs consideration.

Please feel free to distribute as appropriate.

Distribution:

Cleveland, Tennessee	Glenn Martin
