SUBJ: REVIEW OF VISTA DOCUMENTS FOR CONFIDENTIALITY

I spoke to Jack Cameron in Houston PED about developing some guidelines for confidentiality searches. Below is what he provided me.

Items we would prefer to remove for government submittals or claim as confidential:

1. Any PFD's or P&I's
2. Any information which gives detailed process operating conditions such as temperatures, pressures, or flow rates.
3. Any data that gives site specific production rates. If any is required, we should consider providing approximate numbers or already published capacity data.

Let me know if you want to discuss this further. I believe the above is what you wanted to assist you in existing file searches and to develop guidelines for future submittals.
