SUBJECT:

I received a telephone call from Lee Toplow, of Organization Resources Counselors, on Friday, September 20, 1974 indicating that the new standard for vinyl chloride in air will be 10 parts per million time weighted average, 25 parts per million ceiling for the first 5 years - being reduced to 1 part per million time weighted average with a 5 parts per million ceiling.

This information is considered confidential until October 1st and there is always the possibility of some changes being made. The source is considered reliable.
