Dr. Robert A. Kehoe
University of Cincinnati
College of Medicine
Kettering Laboratory of Applied Physiology
Cincinnati, Ohio.

Dear Dr. Kehoe:

I am sending by express eleven urine and feces specimens which were collected during a twenty-four hour period from January 24 to January 25 and having an exposure period of better than three days. Minute detailed instructions was given every one and I hope that we can get proportionate results. These eleven men take care of the twelve jobs which were selected for study and the attached table will give a description of the type of work each individual does and the years exposure.

Enclosed are physical examination reports of the group. The unstained slides of which there are two on each individual, are in the box containing the fecal specimens.

I am very sorry that I forgot to ask you a question while you were here, and that is your own rationale relative to therapy in acute and chronic lead poisoning. There seems to be a great deal of confusion in the literature on this subject.

With kindest regards, I remain

Sincerely yours.

C. F. Yeager M.D.
Plant Physician.

P.S. One fecal specimen will be shipped separately.
