June 13, 1950
(Dict. 6/12)

CC: Mr. A. V. Baber, Toledo
Mr. T. A. Collins, Toledo
Subject Mr. W. M. Hankins, Jr., Toledo
Mr. W. S. Magee, Toledo
Mr. E. C. Shuman, Toledo
Mr. O. W. Pfeifer, Sayreville

PLAINTIFF'S EXHIBIT O-I-56

* INSULATING CEMENT NO. 4

We are enclosing herewith the following correspondence which is self-explanatory:

Letter from A.V. Baber dated 6/7/50 to Hankins.
Letter from A.V. Baber dated 6/7/50 to Shuman.
Letter from A.V. Baber dated 6/8/50 to DeRoos.
Letter from W.C. Taylor dated 6/8/50 to Shuman.
Letter from E.C. Shuman dated 6/12/50 to me.

The subject has now come up again concerning our starting to make insulating cement, which from all probability will develop into a large production item in the near future. It appears appropriate that all the data should be pulled together that you have been working on relative to machinery to do this job, in order that we can move in the best possible direction.

This is something we would like to discuss following the manufacturing meeting on Monday, June 19. We would appreciate your bringing to the meeting all of the information you have, and let's determine just where we stand on this subject.

Sincerely yours,

C. W. Howard

San Francisco 16, California

Dear Mr. Abrahams:

We are interested in what type of mixer you would recommend for mixing cement. Our present formula for making Zylo cement is quite different from that of the Sagneck people in that we use 48% Zylo scrap to which we add 30% Asbestos, 20% high early Portland cement, and 1½% Methocel which is a wetting agent.

Yours very truly,

KELLOG GENERAL ENGINEERING DEPT.

PLAINTIFF'S EXHIBIT

Subject * KAYLO INSULATING CEMENT NO. 4

File: 88.4

The formulation for Kaylo Insulating Cement No. 4 has not been changed. It remains: 59% of Kaylo scrap, 30% of 7M chrysotile, 20% of portland cement, and 1% of Methocell.

The specifications for the scrap material are as you listed. It is suggested that the fines, i.e., thru 150 and retained on 200, be held as low as practical.

Scrap suitable for the insulating cement is also satisfactory for introduction into kaylo batches.

PLEASE NOTE AND RETURN

Toledo 1, Ohio

Dear Ev:

We are developing considerable interest in Kaylo No. 5 cement and I would appreciate as much information concerning test results of this material as possible. I am particularly interested in its adhesiveness to Kaylo, also light-weight 85% Magnesia if you have it. It would also be interesting to know the "K" factor.

We have recently applied some of this material as a finishing cement and have received gratifying reports from the field. Anything you may be able to contribute, including price, will be appreciated.

With kindest personal regards.

Yours very truly,

CARBIDE AND CARBON CHEMICALS COMPANY
