

ETHYL GASOLINE CORPORATION

CHEMICAL RESEARCH LABORATORY

7600 WEST EIGHT MILE ROAD

DETROIT, MICHIGAN

September 27, 1940

Dr. Robert A. Kehoe

Dear Bob:

Dr. MacConnell of the Herman Keifer Hospital, is a member of the Detroit Board of Health, and is taking an active part in arranging the American Public Health Convention at the Book-Cadillac Hotel October 8-14. Dr. MacConnell is going to make an exhibit of industrial hazards and will mention tetraethyllead (presumably as a hazardous material), and Ethyl Gasoline, this one as an example of the non-dangerous class. He told Dr. Beatty that he had made a large number of tests on filling station attendants, the results of which will be published in about a year, and show absolutely no hazardous effect of leaded gasoline.

Very sincerely yours,

George Calingaert
