

ATTACHMENT II

CHLORINATED, HYDROCARBONS (Outfalls 010/018/118). The maximum limit of 1368 lbs/ was exceeded twice during the quarter and reported as follows:

April 4, 1983. Although extensive investigations took place and some problems were uncovered, no specific cause of this excursion could be found.

June 5, 1983. The excursion was the result of operator error. Mechanical failures within the plant allowed phased organics to reach the final containment sump upstream of Outfall 010. Failure of the operator to clean out the sump on a timely basis allowed enough to escape to cause this excursion. The equipment which failed was repaired and operating instructions regarding inspection/cleaning of the sump were reemphasized.

ATTACHMENT III

TOTAL SUSPENDED SOLIDS (Outfalls 011/017/019). The maximum limit of 2236 lbs/day was exceeded once during the quarter and reported as follows:

June 30, 1983. The excursion was due to abnormally high solids in the discharge of brine solids treatment (019) system. The solids level has been returned to normal by revising the operating parameters of the treatment system. The exact cause of the excursion is, however, still under investigation.
