Agreed:
1) Monsanto continue work sharing up process to 0.1 ppm. Develop std's for pentar chloro
2) Duwood contact Europe - see if Berger wants to talk re test methods etc
3) Monsanto run pentar moth & "used" PCB's.
4) Monsanto consider outside lab - run & confirm our data (W. R. F. contact with EPA)
5) Run mine to conference photo for include thing to target end of year for include thing to be worked up.

PCB-Furan Data

6/6/75

- Reprocessing/mixing with 2/3 chemicals, FDA
- One sided conversation - only a few remarks from them
- We left them with some doubts on what they were reporting

FDA has reported twind finding dichlorodib in 10'6

dichlorodibenzofurans	di	} m/1242
	tri	
	4 Tetr	
	dib	
	pent	m/1254
	hex	

FDA have never shown data in public

We did work

- no clear cut indication of them being present
- or if present (on order of magnitude less than (1 ppm.) what they are reporting
- We went over our data with FDA
- We asked their comments
 - none of 4 present had ever seen their data. One was fellow who presented paper - making the claim.
- Our feeling that it was low order of priority on their part.
