Peggy,

Can we do any scaling back on our plans for this year; ie., do most of the cottrell hopper and outlet flue job and just patch work in the powerhouse? How much \$\$\$? My feeling is that we should continue with the abatement consultant but I need to know how much cost it will add to the operating budget if I can't get it appropriated.

Priority: High

Larry,

I'd need to know the status of the Asbestos Abatement for the Converter Cottrell hoppers and outlet distribution flue. Should I continue with the Asbestos Consultant abatement plan still looking to begin this project this first quarter?

Also status of the Power House abatement? Would like to look at doing this either the second or third quarter.

As long as we are discussing projects, what is the status of the converter skimmer station design?

Always money \$\$\$\$\$\$.
