BACK FROM VACATION I READ YOUR TELEX OF 1ST REGARDING A NEW
ITALIAN CASE OF ASL.

AS A MATTER OF FACT I WAS AT THE RESTAURANT WITH MALTONI
MANN AND OTHERS BUT I DID NOT HEARD THE CONVERSATION ON ASL.
AFTER RECEIVING YOUR TELEX MATTIUSSI CONTACTED MALTONI AND
OTHERS AND OBTAINED THE ORIGINAL DOCUMENT PREPARED BY MALTONI
AND USED AS A SUPPORTING DOCUMENT FOR RECOGNITION OF OCCUPATIONAL
DISEASE.

A 46 YEARS OLD MAN DIED ON 6.4.83 HE HAD WORKED FROM 1967 TO
1975 AT PANSAC (EXTRUDING DEPARTMENT) AND FROM 1976 TO 1983
IN OTHER DEPARTMENTS (COMMERCIAL). FIRST SYMPTOMS APPEARED
ON 7.3.83. HOSPITALIZATION ON 26.3.83 (OSPEDALE G.B. GIUSTINIANI,
VENICE); THE BIOPIC DIAGNOSIS WAS - COLANGIO-CELLULAR CARCINOMA -.
A LIVER SAMPLE WAS SENT TO PROF. MALTONI AND HIS DIAGNOSIS WAS
-MULTICENTRIC ASL, WITH PELIOSIS LIVER, CELLHYPERPLASIA AND
HYPERPLASIA AND DISPLASIA OF ANGIOBLASTS-.

THIS DIAGNOSIS WAS CONFIRMED BY THE PATHOLOGIST OF THE HOSPITAL.
MALTONI CONCLUDED THAT THE ASL WAS TO BE RELATED TO CVM EXPOSURE.

I HAVE THE DOCUMENT IN ITALIAN AND I COULD SEND YOU A COPY.

REGARDS.
