To R. D. Gamblin, Westlake, Louisiana
From Robert L. Lembke, M. D., Ponca City, Oklahoma
Date April 24, 1974
Subject Medical Division Review - March 1974 VCM History, Physical Examination and Laboratory Data

For your information I have reviewed the March 1974 history, physical examination and laboratory data on ninety-nine employees at the Lake Charles VCM plant.

I have, this date, submitted to Gordon Monroe, R. N., in writing my findings and recommendations. I found no abnormal findings on any of these employees which would indicate job-related toxicity; however I have requested two laboratory repeats—one because I feel the employee was not fasting and otherwise prepared prior to the taking of the blood sample, and one because of a slightly increased liver function test.

All abnormal findings were submitted to Mr. Monroe with appropriate recommendations since we feel morally obligated to do so in the best interests of each employee's health, even though these findings are not considered job-related.

A handwritten signature in cursive script, appearing to read "Robert L. Lembke".

Robert L. Lembke, M. D.
Medical Director
