Subject: The cost of carbon is \$94-232/ton, not \$5

Here's the most recent estimate of the cost to clean up carbon: <https://www.nature.com/articles/d41586-018-05357-w>

It is not \$5 a ton. It is \$94-\$232 a ton. If you make a mess, you should have to clean up after yourself. This is simple, preschool-level stuff. Basic personal responsibility. Since your "administrator" is a member of the "party of personal responsibility," I expect that you will be changing your calculations such that this cost is reflected in your cost-benefit analyses, rather than the incorrect cost of \$5.
