CORROSION DAMAGE PREVENTION - - With

Somastic ★

A Railhead Plant in the Field

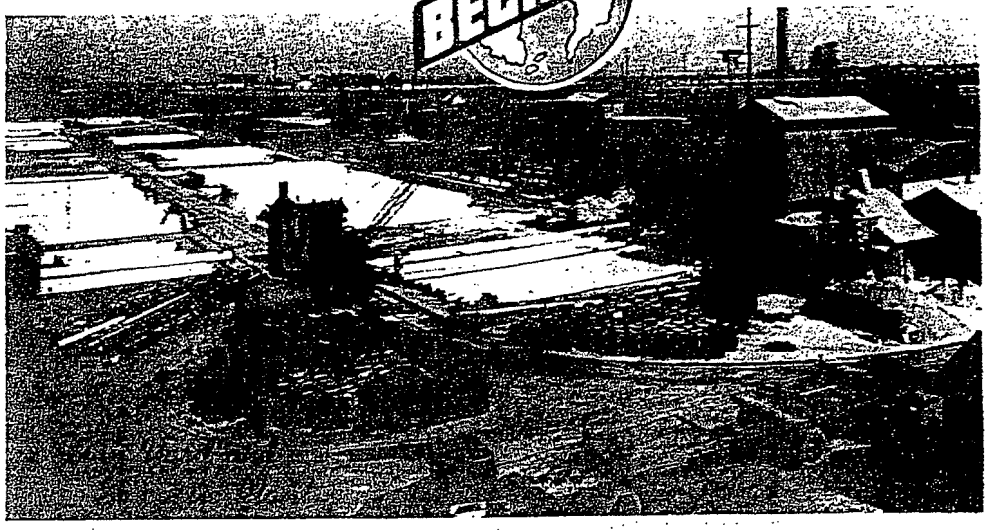

BY COATING PIPE with somastic pipe coating, corrosion damage can be prevented before it starts. Long range experience has demonstrated under the most severe tests in highly corrosive locations for already known periods of eighteen years that this impervious coating has proved the staying quality of this protection.

AUTHENTIC RECORDS established in the A.P.I. ten-year pipe coating tests and on thousands of miles of operating lines have furnished conclusive evidence of the effectiveness of this coating.

Somastic pipe coating is a special mixture of asphalt mix mastic compounded to rigid specifications and firmly bonded to the pipe as a thick seamless coating. Overlapping field joints of the same mixture make this protection continuous along the pipe line.
