Subject: Possible Asbestos Exposure

Per our telephone conversation of 5-14-80, two locations have been identified for the possibility of employee exposure to asbestos through a gasket, part #50A-5B266-AA, used for the assembly of the catalytic converter. The operations are located at column posts J-43 and G-2. The Kansas City Assembly Plant requests monitoring to determine the employee exposure to asbestos.

HR Early

RLW. has indicated that we are not to do any asbestos jobs until further notice and/or they pass through him first. Asbestos jobs that have been initiated through Dr. Blocker letter or Joe Fisher are to be put in a holding pattern.
