

- g. A Training Program for all employees who are exposed to airborne concentrations of asbestos at or above the Action Level should be developed and implemented. This Training Program should include provisions for discussing the health effects associated with asbestos exposure, the relationship between smoking and exposure to asbestos, the quantity and location of asbestos, the specific nature of operations which could result in exposure to asbestos, engineering controls and work practices associated with employees job assignment, proper use of personal protective equipment, the Medical Surveillance Program, the provisions of OSHA 1910.1001. This Training Program should be repeated annually. Records should be maintained on file to document all training sessions.
- g. Resampling to evaluate employee exposure to asbestos should be conducted at least semi-annually. Also, resampling is adjusted to ensure that any engineering controls implemented are effective in reducing employee exposure to asbestos.

These are minimum requirements of the OSHA Asbestos Standard. To ensure compliance with this legal standard, a review of OSHA Standard 1910.1001 should be conducted. A copy of this Standard was provided with a previous report from the sampling performed February 28, 1989.
