ATMOSPHERIC POLLUTION FROM ASBESTOS FIBERS

Ref: Letter from C. M. Hunter to Photo
Products Plant Managers of 6/1/70

For your information, attached are the responses received from Photo Products plants in reply to the reference letter and questionnaire. As you will note, of the four plants only one, Parlin, reports that they have sufficient exposure to warrant significant action. Their plans are covered in the letter from J. J. Laurino. Rochester is looking for asbestos-free alternative materials for limited applications.
