ROCKDALE WORKS

1979 September 18

RE: ASBESTOS EXPOSURE

Results of the asbestos exposure test run while dismantling thermocouples with asbestos insulation are given below.

| <u>Name of Employee</u>      | <u>Eight Hour Time Weighted<br/>Average Concentration<br/>(Fibers &gt;5 Microns Long/cc)</u> | <u>OSHA Std.</u> | <u>Actual Exposure</u> |
|------------------------------|----------------------------------------------------------------------------------------------|------------------|------------------------|
| J. L. Stewart<br>452-52-0587 |                                                                                              | 2                | 0.06                   |

Results of the test indicate that Mr. Stewart's exposure to airborne asbestos was well below the OSHA standard.

Would you please communicate these results to Mr. Stewart. If I can be of help, please let me know.
