April 13, 2017

Administrator Pruitt,

It is truly a great honor having a fellow Oklahoman as Administrator of the Environmental Protection Agency. I appreciate your dedicated service to our nation. It's refreshing to have someone with downhome common sense values addressing the environment.

One of my constituents has asked that I pass on to you his present project. He has spent many hours, using his own funds toward this work. The standard of construction is exceptional. It is a clean burning flare pipe which meets EPA standard 60.18. It is built with safety and efficiency in mind. Also, it contains H2S burn off capabilities.

Knowing you meet with many leaders of industry, we would appreciate any recommendations you could give. I personally have NO financial interest in this product or related business. Mr. Wilson is a fine Christian man that works hard and is trying to make a good product.

Thanks for your consideration.

Device Features:

- Portability
- Saving time on hours
- Exceptional safety features
- Lowers cost of insurance rates
- On/off switch controlled with smart device
- H2S Burn off capability
- Fan driven
- Capable of controlling flash back

Flare Pipe Company FOR SALE

Stationary Flare Pipe

- Stands 22'5-40 psi off tank battery.
- Can be moved with a fork lift or shuttled with optional custom trailer.
- Devices have steel caster wheels used to roll for loading/unloading.

Portable Flare Pipe

- Stands 32'30 – 125 psi.
- Mounted on hydraulic unit for lowering/raising use.
- Designed to carry pipe to set up the proper safety features necessary.

Ignition Design allows "clean burn" in 3 minutes and 36 seconds!

Flare Performance Evaluation Conclusion:

The unit tested was equipped with a pilot system utilizing an enclosed thermocouple to continuously monitor pilot temperature. The pilot light system is designed to provide continuous ignition during operation. In the event of flame failure where the pilots relight fails, the system is programmed to initiate an automatic shut down.

Performance test results indicated the High Pressure flare located at the test site is in full compliance with the EPA standard 60.18 for air-assisted flares.
