Dr. W. E. Ducl,
E. I. Dupont de Nemours Co.,
Dye Works Hospital,
Pennsgrove, N. J.

Dear Dr. Ducl:

I am sending you the results on the analysis of the last samples from your men. You can compare these with those previously reported. I have not had an opportunity to do so as yet in any careful manner because of a press of other work. It will be very interesting, I believe, to compare the results obtained at the next analysis with these at this time, for I believe that the changes which have been made in the lead-ethyl area will bring about a decided drop.

I went over the situation at the plant rather carefully, and I believe that the lead hazards associated with smelting are almost completely done away with. I am more than pleased with the changes that have been made and I believe that they will prove to be satisfactory in every way. In fact, I join with you in believing that it would be difficult to improve upon them further.

Thank you very much for your remarks about the men. I am very glad to know that the stippling has diminished and I am not at all surprised. On my next visit to the plant I hope to be able to know about it soon enough to advise you before hand and spend some time with you.

Very truly yours,

RAK:EJ
