Subject:

Rob,

I hope you had a nice vacation last week. Debbie and I had committed to getting you a few things this week, and we're on track to do that. One of those items is a scope of work for looking at the Washington Works site. Before we create that, didn't you say you had a 2 page description you could send me to give us a clearer picture of your objectives?

I have some in mind, but I'm not sure they are the right ones. I'm thinking you want us to run some site-specific air dispersion modeling for the WWV site to show the deposition on the land surrounding the site (I'm thinking we pick a radius that includes the river and the community of Lubec). You would also want to know total runoff and deposition contribution to the river. All this will help you understand how important air transport of our compound is in the big picture, as compared to what the receptors may already be experiencing from other pathways.

Right??

Debbie and I need to get together (recall she has also been on vacation) before we can give you a call with the other information we discussed. I'm thinking Tuesday, but the very latest would be Wednesday.

Thanks,
Cathie
