DATE: 1946 Jan

DOC#: CRC013

DOCUMENT DESCRIPTION: Journal Article with List of Advertisers -
Heating and Ventilating - Air Fills the Bag

HEATING VENTILATING

Crane Co.

A MONTHLY MAGAZINE FOR ENGINEERS AND CONTRACTORS CONCERNED
WITH COMMERCIAL, INDUSTRIAL AND INSTITUTIONAL AIR CONDITIONING,
REFRIGERATION, AIR SANITATION, PIPING, HEATING AND VENTILATION

Published by

THE INDUSTRIAL PRESS
Also publishers of MACHINERY
and technical books

President
ROBERT B. LUCHARS

Vice-President and Treasurer
EDGAR A. BECKER

Secretary

Publishing Information

HEATING AND VENTILATING is published monthly by The Industrial Press at 148 Lafayette Street, New York 13, N. Y. Yearly subscription in the United States, Spain, South America, Mexico, and Canada, \$2.00; in all other countries, \$3.00. Single copies 30 cents. Entered as second class matter, April 18, 1925, at the Post Office, New York, N. Y., under the act of March 3, 1879.

Air Fills the Bag

WM. B. FOXHALL

Assistant Editor
HEATING AND VENTILATING

CONTROLLED air was the answer in one plant to the problem of packaging powdered asbestos.

Arthur A. Gardner put the research department of Breslee Mfg. Co. to work on the problem of filling thousands of cotton bags with asbestos for dummy propelling charges required by the Army for practice firing of the 105-mm howitzer. The problem was complicated in several ways. First, each charge consists of seven bags loaded to specified weights ranging from 1.7 oz to 13.1 oz. Second, the tackiness of the asbestos made hand weighing difficult and prevented the use of gravity feed machines. Third, the dust of powdered asbestos is a health hazard.

Mr. Gardner's engineers designed an assembly line of seven filling machines piped into a master vacuum system which both filled and weighed the bags by air.

The operation of filling the bag takes place within an air-tight box opened on one side by a sliding door, the frame of which is lined with sponge rubber to make an air-tight seal when the door is closed.

The operator clamps the empty bag to a nozzle suspended from the top of the box. This nozzle connects outside the box to a flexible transparent plastic tube about 4 ft long. The open end of the tube is used by the operator in picking up asbestos from a hopper resting on one side of a scale. The other side of the scale carries several small metal plates, the total weight of which perfectly balances the asbestos in the hopper. Each plate represents the exact weight of one filled bag.

With the scale in perfect balance, the operator removes a single metal plate, throwing the scale off balance the exact amount necessary to fill one bag.

Showing scale arrangement and open door of vacuum box containing bag clamped to end of saran plastic tube.

She then inserts the mouth of the tube into the hopper and steps on a treadle to open a valve connecting the tube and fill-box to a vacuum system. Asbestos is drawn from the hopper and deposited in the bag. As soon as the scale returns to balance, the operator closes the valve and the flow of asbestos stops immediately.

Breslee engineers estimated that their vacuum filling system required 450 cfm through the tube. They installed a Spencer turbine blower powered by a 7½ hp motor at 3500 rpm, which maintained the required vacuum with a volume of 600 cfm, more than sufficient for the proper functioning of the system.

This vacuum method of precision filling resulted not only in extreme accuracy but also in about 600% increase in production over hand weighing and filling. Still more important, however, was the elimination of the hazard to health represented by the manual handling of the finely powdered asbestos.

Part of packaging assembly line. Hoppers of asbestos on scales balance boxes of measured weights. As weights are removed one by one, asbestos is vacuum drawn out of hopper into cotton bag through flexible transparent tube to return scale to balance. Foot treadle controls vacuum.

CLASSIFIED ADVERTISING

Non-display advertisements 10 cents a word per insertion. (No charge for name and address.) Minimum charge \$2.00. Payable in advance.

FIELD ENGINEERS: Leading manufacturer has openings for experienced engineers in Refrigeration, Air Conditioning and Heating. College graduates with Sales Engineering Application knowledge desirable. Salary, car and traveling expenses provided. Write, giving full background and qualifications in first letter. Write Box No. 490, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

MECHANICAL ENGINEER wanted by well-known manufacturer of heating equipment for research and development. Experience with combustion and particularly with small gas fired appliances desirable. Location New York vicinity. Please state age, education, experience. Replies held confidential. Box No. 485, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

HOW TO SELL THE CHICAGO AND MIDDLE WESTERN MARKET
Live wire sales representative with 15 years successful background, available to a manufacturer of Malleable and Cast Iron Pipe Fittings, Steel Pipe Nipples, Cast Iron Soil Pipe or Copper Tubing and Brass Pipe. I have orders on hand, also a very broad acquaintance with key buyers of, and major users of, these products in this territory, and my sound sales plan will assure maximum results. If your company has these meritorious products and is deserving of optimum sales distribution, it will pay you to consider strongly my comprehensive sales-representation for your coverage of this territory. Can give you a minimum guarantee of set dollar volume or you need not pay me one penny commission if I fail to meet quota during 90 day trial period. Write or Wire Box No. 481, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

SALES ENGINEER: For National Accounts. College Graduate with experience in Air Conditioning desirable. Vacancy existing in established manufacturing company operating on nation-wide basis. Write, giving full background and qualifications in first letter. Box No. 488, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

EXECUTIVE POSITION WANTED by graduate mechanical engineer with 25 years engineering experience in building construction, heating, ventilating, air conditioning and commercial refrigerating equipments. Professional licensee. Location preferably Eastern Central Seaboard. Salary \$7,000. Box No. 487, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

SAVE vital trucks, gasoline and tires. Reduce costs. Not too late to start automatic fuel oil truck deliveries. Write us. Degree Day Systems, 5106-39th Avenue, Woodside, N. Y.

WANTED—High class installation and service manager for complete heating systems, oil burners and air conditioning. If you have the ability communicate with us at once. Mechanical Devices Co., Inc., 141 Oakland Street, Trenton, New Jersey. Trenton 8208.

WE ARE interested in securing the services of a Designing Engineer familiar with Low Pressure Boilers for commercial and household use. Permanent connection. Replies held confidential. Send letter stating age, draft status, education and past experience. Statement of availability required. Box 430, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

DISTRICT REPRESENTATIVE: Leading manufacturer has openings for seasoned men in Heating, Cooling and Commercial Refrigeration. Specialty selling and dealer selection knowledge desirable. Salary, car and traveling expenses provided. Write, giving full background and qualifications in first letter. Box No. 489, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

POSITION WANTED—Army Captain, Corps of Engineers, seeks responsible position. 5 years experience in engineering sales, estimating and design of heating, ventilating and air conditioning. References on request. Box No. 483, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

POSITION WANTED—Graduate of an Air-Conditioning and Electrical Refrigeration School wishes further practical training with a reputable firm. Location and salary secondary. Single, Honorably discharged veteran. Box No. 484, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.

WANTED—Man with experience in sales engineering to manage branch office at Baltimore. Company distributes all types of fans, blowers and pumps. Distribution of equipment to be handled through established jobber outlets. Fan line includes all types of propeller, axial flow and special industrial fans. Centrifugal line includes all types of air conditioning fans, also all types of high pressure blowers. Applicant shall have had experience in equipment of this class. Salary and bonus. Box No. 486, HEATING AND VENTILATING, 148 Lafayette Street, New York 13, N. Y.
