Re: Monthly activity report for February, 1986.

Dear Jim:

Activities for the month of February, 1986, were centered around the identification and monitoring of asbestos removal projects on the DU-1, VF-1, and CCU-1. Reports of our monitoring and identification activities are attached.

Should you have any questions regarding our activities please let us know.

Sincerely,

Douglas N. Nimmo
Certified Industrial Hygienist

Dear Gene:

On February 26, 1986, a bulk sample of tray packing from V-3202 was collected and analyzed for asbestos content. This packing material was Chrysotile asbestos (95-100%).

To determine if fibers were being released from the packing material, air samples were taken on February 27, 1986. These samples were obtained from inside the 70.8 foot and the 126.8 foot levels of Vessel 3202. Both samples were less than the detection limit of the phase contrast microscope.

Should you have any questions please feel free to call.

Sincerely,

Douglas N. Nimmo
Certified Industrial Hygienist
