SANITARY LAND FILLS OR
TOXIC DUMPS FOR PCB

W. B. PAPAGEORGE

As an outcome of our GE meeting, Bill, it appears that we will very rapidly need to develop acceptable toxic dumps or sanitary land fills where our PCB customers can dump their refuse short term (for the next 6 months to 1 year -- or at least until we can get a better alternative). I think this is a high priority item because we are going to be deluged with questions on where to take the material. We will need several of these located geographically near our major volume customers.

Bob Kountz has been developing this information based on Marketing input. I suggest that you talk to him and Don Olson about developing this as soon as possible.
