INTERDEPARTMENTAL COMMUNICATION

DATE: March 25, 1974

TO: Mr. J. R. Hurd

LOCATION: Portland

FROM: J. D. Rauch

LOCATION: Akron

SUBJECT: IN PLANT ENVIRONMENTAL DUST MONITORING PROGRAM

PLAINTIFF'S EXHIBIT

GP-1584

cc: Mr. E. B. Hollingsworth - Wilmington

Regarding your 3/19/74 memo. I have attached a copy of my 2/8/74 report to Mr. Hollingsworth. I believe this outlines my feelings on this matter.

My suggestion would be that we purchase several approved test pumps and pass them around from plant to plant for dust sample purposes. We should set up one central point where some one can do the actual asbestos count. The test results would of course be only of value to ourselves and to comply with the OSHA self monitoring program. They, OSHA, will not take any tests other than their own as proof of compliance.

I have also attached a part of an instruction course we have that may be of some value in your decision.

J. D. R.

Mr. J. D. Rauch
Plant Manager
Georgia-Pacific Corporation
Bloomingdale Road
Akron, New York 14001

Dear Mr. Rauch:

The most recent asbestos sampling survey shows that employees are not exposed to harmful airborne asbestos dust levels either for an 8 hour Time Weighted Average or for Ceiling Concentrations.

Sincerely,

Chester C. Whiteside
Area Director
