Subject: writer for HowStuffWorks, seeking information about ultrafine particles

I'm a writer for HowStuffWorks, a website that does a lot of science, technology and health-related news coverage. I initially contacted Enesta Jones, but got a bounce-back message saying she was out of the office and directing me to this email account.

I have a few questions for a story that I'm trying to do on the subject of ultrafine particles, and the extent to which they're a health concern.

Q: I've seen it said in some other news articles that the EPA doesn't regulate or set limits on ultrafine particles (0.1. microns in size), though it sets air quality standards for larger particles. Is that accurate?

Q: Has there been any recent consideration of creating a standard for ultrafine particles? If so, what stage is the agency at in the process?

Also, I'm wondering if you can put me in touch with an agency expert on this subject.

regards,
Patrick J. Kiger
