SAFETY - FEBRUARY, 1966

At the beginning of the year 1966, we all in some manner or another pledged to make this year the year in which we would achieve our long sought-after goal of working throughout the Construction Division one calendar year accident-free. At this point, our performance trend indicates that unless there is a complete reversal, we cannot be headed but for one thing and that is a troublesome year.

To date, our Division Safety performance has produced the following results:

Injuries Experienced of Sub-Major Severity:

Month of January - 3 injuries

Fractured finger - handling material
Fractured foot - material slid off shop cart
Concussion - fell on icy steps

Month of February - 8 injuries

Laceration of face - pressure testing gasket blow-out
2 Fractured fingers - struck by hammer driving nail
Fractured finger - caught in sheave erecting crane boom
Chipped fracture of elbow - struck on object
