Dear Mr. Riddle:

I have recently learned that Dr. Christine Einert (M.D.) of the California Department of Health plans to visit asbestos operations in the various areas in California. I have no idea what time the visits would be made but I know for sure that Dr. Einert will be primarily interested in asbestos dust and its control. Therefore, I would attempt to keep the dust control system at its most effective operation.

I don't believe you will find Dr. Einert difficult to talk to but I feel I should tell you that she has considerable experience in industrial health.

Yours very truly,

Paul W. McDaniel
 Industrial Hygiene Engineer
