

CHEMICAL MANUFACTURERS ASSOCIATION

September 25, 1995

Dear Vinyl Chloride Health Committee Members:

Comments from the ATSDR on the developmental/reproductive effects study protocol are enclosed. I will request Bill Breslin of Dow to prepare a revised protocol based on the comments and a response on items that cannot be incorporated in the protocol. I will send you the revised protocol and the response for your review prior to submission to ATSDR.

Sincerely,

Hasmukh Shah  
Manager, Vinyl Chloride Health Committee

R&S 146726

Agency for Toxic Substances  
and Disease Registry

Hasmukh C. Shah, Ph.D.  
Manager, Vinyl Chloride Panel  
Chemical Manufacturers Association  
2501 M Street, N.W.  
Washington, DC 20037

Dear Dr. Shah:

This is in response to your October 23 letter in which you enclosed (1) a revised study protocol, "Vinyl chloride: Combined inhalation two-generation reproduction and developmental toxicity study in CD rats," and (2) the Chemical Manufacturers Association's (CMA) response to the Agency for Toxic Substances and Disease Registry's (ATSDR) peer reviewers' comments on the protocol. The study protocol was submitted by CMA to ATSDR for the purpose of conducting voluntary research to address ATSDR's priority data needs for vinyl chloride.

We have reviewed the CMA responses and the revised study protocol and found them to be satisfactory. Also, we agree with CMA's rationale for reducing the number of animals in the developmental study to 25 per group from 30 per group as described in the original protocol. With regard to a neurotoxicity component for this study, we confirm that the Environmental Protection Agency does not require additional neurotoxicity data at this time.

Therefore, we ask that you complete a memorandum of understanding (MOU) for the combined inhalation two-generation reproduction and developmental toxicity study and forward it to ATSDR. A hard copy and an electronic version of the ATSDR MOU are enclosed for your use.

In addition to reproductive and developmental toxicity studies via inhalation, I would like to bring to your attention two other ATSDR priority toxicity data needs for vinyl chloride, specifically, dose-response data in animals exposed via inhalation for acute- and chronic-duration. This was described in the Agency's March 10, 1994, Federal Register notice, "Status of the Superfund Substance-Specific Applied Research Program; Notice" (59 FR 11434), and Priority Data Needs Document for Vinyl Chloride.

Recently, we reevaluated the toxicity database for inhalation exposure for acute-duration. We determined that, at the present time, there is no need to obtain additional data as originally stated in the ATSDR Federal Register notice and priority data

R&S146727

needs document. This is reflected in the updated Toxicological Profile for Vinyl Chloride that is available for public comment.

With regard to chronic-duration studies via inhalation, we believe that the available data do not provide a suitable lowest-observed-adverse-effect level (LOAEL) or a no-observed-adverse-effect level for deriving ATSDR's Minimal Risk level (MRL). The MRL is defined as an estimate of daily human exposure to a dose of a chemical that is likely to be without an appreciable risk of adverse noncancerous effects over a specified duration of exposure.

The lowest LOAEL identified in a chronic-duration study was for a serious end point (testicular necrosis) in a rat study. However, MRLs are not derived using a serious end point. In addition, carcinogenicity was observed at concentrations equal to and less than that for testicular necrosis. Therefore, we have identified a priority data need to conduct additional animal studies via the inhalation route, the most relevant exposure route for populations living in the vicinity of hazardous waste sites. These studies are needed for determining exposure concentrations of vinyl chloride that establish dose-response relationships and defining threshold levels for chronic adverse health effects.

In light of the leadership role of CMA in conducting research on vinyl chloride, and the Agency's need to obtain additional data on vinyl chloride, we would also be interested in discussing opportunities for collaborative research to address this need. Please let me know of your interest in discussing this potential research.

We look forward to signing the MOU with CMA and to a continuing dialogue with CMA leading to additional successful voluntary research efforts to address ATSDR's data needs for vinyl chloride. If you have any questions, please call me at 404-639-6306.

Sincerely yours,

William Cibulas, Ph.D.  
Chief, Research Implementation Branch

## I. PURPOSE

This Memorandum of Understanding (MOU) is entered into by the Agency for Toxic Substances and Disease Registry (ATSDR) and the private sector organization(s) identified in Paragraph I below (hereinafter referred to as the "company") in order to implement Section 104(i)(5) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA). These Congressional acts direct ATSDR to assure the initiation of a program of research designed to determine the health effects of hazardous substances for which adequate health effects information is not available. In order to facilitate the discharge of ATSDR's responsibilities under Section 104(i)(5) of CERCLA, and in recognition of the fact that the company includes manufacturers and/or processors, or registrants of the hazardous substance(s) that is the subject of this MOU, ATSDR and the company hereby agree as follows:

**II. IDENTIFICATION OF THE COMPANIES THAT ARE PARTIES TO THIS  
MEMORANDUM OF UNDERSTANDING**

The following companies are parties to this MOU and shall be responsible for ensuring that the obligations and undertakings of the companies under this MOU are discharged and carried out as provided herein:

Names and Addresses of Participating Companies

**III. IDENTIFICATION OF THE SUBSTANCE(S) SUBJECT TO RESEARCH  
REQUIREMENTS UNDER THIS MEMORANDUM OF UNDERSTANDING**

The chemical substance(s) that is the subject of this MOU is \_\_\_\_\_ (CAS No. \_\_\_\_\_). The chemical substance to be tested shall be as pure as reasonably can be attained. However, under certain circumstances, ATSDR recognizes that it may be more desirable to test mixtures or technical grade products. [Note: Substitute alternative language when the subject of the research is a human population as in epidemiologic studies].

**IV. IDENTIFICATION OF THE EFFECTS OR CHARACTERISTICS FOR WHICH  
RESEARCH IS TO BE CONDUCTED**

The health effects, environmental fate or other characteristics for which research is to be conducted by the company under this MOU are listed below:

[ To be listed by the company ]

**V. IDENTIFICATION OF STUDY PLANS AND TESTING PROTOCOLS AGREED  
TO BY ATSDR AND THE COMPANY PRIOR TO SIGNING OF MOU**

The research to be conducted on (name of chemical substance) pursuant to this MOU is identified in Table 1 below. The study plan, guidelines and protocols that were agreed to by ATSDR and the company are listed in Table 1 and described in detail in an Attachment to this MOU. The company agrees to perform (or sponsor and fund the performance of) the research identified in Table 1 in accordance with the guidelines and schedules established pursuant to the study plan and testing protocols agreed to prior to signing of this MOU.

**TABLE 1**  
**IDENTIFICATION OF STUDY PLANS AND TESTING PROTOCOLS**  
**AGREED TO BY ATSDR AND THE COMPANY PRIOR TO SIGNING OF MOU**

|                              |

|                      |            |                      |                      |

\* Citation to 40 C.F.R. where appropriate

**VI. SUBMISSION OF STUDY PLANS AND ESTABLISHMENT OF SCHEDULE FOR INITIATION OF RESEARCH AND SUBMISSION OF INTERIM AND FINAL REPORT**

A. Prior to signing of this MOU the company shall submit to ATSDR the study plan for each test that is to be conducted pursuant to this MOU (see Appendix 1).

B. Prior to entering into this MOU, the study plan including all testing protocols and guidelines shall be reviewed by an ATSDR appointed peer review panel. Consistent with CERCLA section 104(i)(13), the peer review panel will consist of no fewer than three nor more than seven peer reviewers who a) are selected by the Administrator of ATSDR; b) are disinterested scientific experts; c) have a reputation for scientific objectivity; and d) lack institutional ties with any person involved in the conduct of the study under review.

C. The study shall be initiated within 8 weeks of the date on which ATSDR and the company have signed this MOU. Written notification of the starting date of the test will be submitted to ATSDR by the company. The completion date of the study will be established from the approved study plan.

D. Unless modified pursuant to Paragraph VII, a final draft report on the results of testing conducted pursuant to the approved study plan and signed into agreement under this MOU

shall be submitted to ATSDR within 20 weeks of the end of the study for ATSDR's peer review, consistent with CERCLA section 104(i)(13). Following acceptance by ATSDR, upon recommendation by the peer review panel, the company will submit a final report of the study to ATSDR within 4 weeks. Final reports will not be accepted if the data is designated Confidential Business Information (CBI) or otherwise restricted from public disclosure with the exception of personally identifiable information on study subjects. [Note: When the MOU covers multiple tests, different final report periods could be established for the different tests].

E. Unless modified pursuant to Paragraph VII, interim progress reports on each testing program conducted pursuant to a study plan approved by ATSDR under this MOU shall be submitted to ATSDR within 6 months after the initiation of testing, and thereafter, within 6 months after the submission of each previous interim report. If the study is scheduled to be completed in one year, an interim brief letter addressing the status of the research must be submitted to ATSDR within 6 months of the initiation of the study.

## **VII. MODIFICATION OF STUDY PLANS, GUIDELINES, AND SCHEDULES**

A. If the company seeks to modify a study plan, guidelines, or schedules that have been approved by ATSDR pursuant to this MOU, the company shall notify ATSDR in writing of the proposed modifications and the reasons therefor. ATSDR shall respond in writing to the proposed modifications within 2 to 6 weeks either: (i) approving the modifications as proposed, (ii) approving the modifications as revised by ATSDR, or (iii) disapproving the modifications entirely. If ATSDR does not approve the modifications as proposed, the company will have 2 weeks within which to: (i) accept ATSDR's decision and proceed in accordance therewith, (ii) request that ATSDR reconsider its decision, or (iii) withdraw from the MOU. ATSDR will respond to request for reconsideration within 2 weeks (see Figure 1).

B. If the company submits a request for modification to ATSDR pursuant to Paragraph VII. A., the time schedule established for completion of these tests shall be extended by the length of time required by ATSDR and the company to respond to and approve the modifications.

## **VIII. OBSERVANCE OF GOOD LABORATORY PRACTICES**

All research agreed to in this MOU shall be conducted in accordance with the Good Laboratory Practice (GLP) standards

Figure 1.

codified in 40 C.F.R. Part 792, Subparts B, C, D, E, F, G, J, and L, to the extent that such GLP standards apply. Should Good Epidemiology Practices ("e.g., Guidelines for Good Epidemiology Practices for Occupational and Environmental Epidemiologic Research"--The Chemical Manufacturers Association's Epidemiology Task Group, Journal of Occupational Medicine, Volume 33, 1221-1229, 1991) be relevant to a research project, those Practices should be affixed to the study plan. -

#### **IX. INSPECTIONS**

The company shall ensure that an authorized employee or duly designated representative of ATSDR is permitted, at reasonable times and in a reasonable manner, to (i) inspect any research or testing facility that is conducting research pursuant to this MOU, and (ii) inspect (and, in the case of records, copy) any records and specimens required to be maintained in connection with research performed pursuant to this MOU.

#### **X. PAYMENT OF COST AND EXPENSES**

The company agrees to pay all costs, direct and indirect, associated with the research programs. ATSDR will assume responsibility for administrative costs including the cost of peer review as part of its overall program.

**XI. EVENTS CONSTITUTING A BREACH OF THIS MEMORANDUM OF  
UNDERSTANDING**

Failure by the company to:

- i) initiate any test agreed to in the approved study plan, appended to this MOU, by the date established pursuant to the study plan;
- ii) adhere to GLP's or established test procedures to the extent that these standards apply;
- iii) submit any interim report required under this MOU by the date established pursuant to this MOU; or
- iv) submit any final report which receives ATSDR's approval following the peer reviewers' recommendations

shall constitute a breach of this MOU. In the event of a breach, ATSDR will not impose any claim to damages, but at the Agency's discretion may terminate the MOU.

Since this MOU is entered into voluntarily by both parties, termination by ATSDR is not considered reviewable agency action pursuant to the Administrative Procedures Act or any other applicable federal law, and there will be no appeal process beyond that set out in the agreement or otherwise mutually agreed to by the parties.

## **XII. FINAL REPORT - SUBMISSION AND PUBLICATION OF DATA**

All data and reports submitted to ATSDR pursuant to this MOU shall be sent to ATSDR, in duplicate, at the address indicated in Paragraph XIV below. Acceptance of the final report is contingent upon approval by ATSDR following the peer review panel's recommendations, consistent with CERCLA peer review requirements. The company maintains all rights to publication of data and results, however all results of research conducted pursuant to this MOU and all supporting data associated with the final research report will be made available by ATSDR to the public as part of its implementation of Section 104(i)(5) of CERCLA. The final report will not be accepted if the data is designated Confidential Business Information (CBI) or otherwise restricted from public disclosure with the exception of personally identifiable information on study subjects.

## **XIII. STATUTORY COMPLIANCE**

Nothing in this MOU shall be construed to delay or otherwise affect or impair the authority of the President, the Administrator of ATSDR, or the Administrator of EPA to exercise any authority of the President, the Administrator of ATSDR, or the Administrator of EPA under any other provision of law, including TSCA and FIFRA, or the response and abatement authorities of CERCLA.

#### XIV. ADDRESSES

Any notifications, reports, or other written statements required to be submitted or sent to a party to this MOU shall be sent by certified mail to the parties at the following addresses:

Agency for Toxic Substances and Disease Registry  
Division of Toxicology, Research Implementation Branch  
Mail Stop E-29

## Appendix 1

### Study Plan and Testing Protocols

Prior to study plan negotiations, ATSDR and the company shall sign a Letter of Intent indicating the good faith intention of both parties to achieve a mutually acceptable study plan. The study plan shall be negotiated and agreed upon prior to the signing of the MOU by ATSDR and the company. The following describes minimal requirements of the study plan. The attached time schedule (Table 2) reflects only the time line contained within the MOU. Other scheduling will be negotiated prior to signing of the MOU

The study plan will consist of (1) the identity of the MOU under which testing will be performed; (2) the specific tests to be performed; (3) the name(s) and address(es) of the company which will conduct the study; (4) the test protocol, including, where appropriate; (i) the rationale for any combination of test protocols, (ii) the rationale for species/strain selection, (iii) dose selection (and supporting data), (iv) route(s) or method(s) of exposure, (v) description of diet to be used and its source, including nutrients and contaminants and their concentrations, (vi) for in vitro test systems, a description of culture medium and its source, (vii) and a summary of expected spontaneous chronic disease (including tumors), genealogy, and life span; (5)

a schedule, with reasonable timetables and deadlines, for initiation and completion of each short-term test and of each major phase of long-term tests, and submission of interim progress report and final report to ATSDR; and (6) supporting data on the chemical substance(s) being tested, including physical constants, spectral data, chemical analysis, and stability under test and storage conditions, as appropriate. In some cases, the obligation to conduct research is contingent upon the results of certain tests that are to be performed first.

Prior to a company entering into an MOU with ATSDR, the study plan including all testing protocols and guidelines shall be reviewed by an ATSDR appointed peer review panel. Consistent with CERCLA section 104(i)(13), the peer review panel will consist of no fewer than three nor more than seven peer reviewers who a) are selected by the Administrator of ATSDR; b) are disinterested scientific experts; c) have a reputation for scientific objectivity; and d) lack institutional ties with any person involved in the conduct of the study under review.

"VINYL CHLORIDE: COMBINED INHALATION TWO-GENERATION  
REPRODUCTION AND DEVELOPMENTAL TOXICITY STUDY IN CD RATS"

PEER REVIEWER COMMENT FORM

September 1995

Name Barbara F. Hales, Ph.D.

1. Are the study objectives clearly stated and appropriate?

☒ Yes

☐ No

☐ Unsure

Why?

2. Is the study design appropriate for the study objectives?

☒ Yes

☐ No

☐ Unsure

Why?

R&S146746

PAGE 2 -- PEER REVIEWER COMMENT FORM

Name Barbara F. Hales, Ph.D.

3. Are the methods selected appropriate for the study objectives?

☒ Yes

☐ No

☐ Unsure

Why?

4. Any overall comments on the protocol?

The protocol has been carefully designed and is well planned.  
It should provide a wealth of data on the effects of vinyl  
chloride on germ cells and on rodents in vivo.

R&S146747

PAGE 3 -- PEER REVIEWER COMMENT FORM

Name Barbara F. Hales, Ph.D.

Select the appropriate category below (List recommended changes or reasons for not recommending:

A. Recommend ( ☒ )

No chnages are required. The study should be carried out as it has been designed. I will be very interested in the results.

B. Recommend with Required Changes ( ☐ )

C. Not Recommended ( ☐ )

PAGE 4 -- PEER REVIEWER COMMENT FORM

Name Barbara F. Hales, Ph.D.

5. Any comments on ATSDR's peer review process?

This process appears to be very thorough. I expect that this has an impact on the quality of the proposals which are submitted.

6. Any other comments?

I enjoyed reading the proposal.

The overall chronology and study design for the developmental portion of this study is depicted in Tables 1 and 2, respectively. ✓

*Developmental - Breeding Procedure*

Sexually mature, adult virgin females, approximately 10 weeks of age and weighing approximately 200 - 250 grams, will be naturally mated with one male of the same strain at the Charles River Breeding Laboratory. Females will be checked for plugs the following morning and those found with a vaginal plug will be removed from the males' cage. The day on which a vaginal plug is detected will be considered Day 0 of gestation. Day 0 body weights will be provided by Charles River Breeding Laboratory, and maintained in the study record. Rats will be shipped on Day 0 or 1 of gestation and will arrive at our laboratory on Day 1 or 2 of gestation.

*Developmental - Maternal Observations*

All animals will be observed daily during the study for alterations in behavior or demeanor as previously described under the Reproduction Study "Physical Observation" section, with the exception that a thorough weekly clinical examination will not be conducted. Any animal which dies, appears moribund or shows indications of early termination of pregnancy will be submitted for a complete necropsy as described for the Reproduction Study. Body weights will be recorded on gestation days 0, 6, 14 and 21.

On Day 21 of gestation, all surviving animals assigned to the developmental study will be euthanized by carbon dioxide inhalation and given a limited necropsy. Any obvious structural or pathologic changes noted in the adult will be recorded and the weight of the liver, kidneys and gravid uteri will be recorded. Liver, kidneys and gross lesions will be preserved in neutral, phosphate-buffered 10% formalin, but microscopic examination of tissues will not be conducted unless deemed necessary to interpret other observations made during the study or requested by the sponsors.
