SOMASTIC*

PROTECTS

RICHFIELD'S PIPE LINE

A major western pipe line development of 1951 was completion of Richfield Oil Corporation's $7,000,000 crude oil line from the San Joaquin Valley to Los Angeles.

Richfield's decision to coat with time-tested SOMASTIC* adds another to the large and mounting list of Somastic-coated pipe lines — now specified as standard practice by line owners wherever permanent pipe protection is essential.
