MCS 1475 (Aromatic sulfone-Santicizer 711 blend)

Advantages:

- Shows good life test results here and at EUC
- Contains no halogen
- Same design can be used as is used for Aroclor 1016
- Biodegradable 50%
- Not likely to be concentrated in food chain
- Lowest cost replacement for 1016

Disadvantages:

- Not fire resistant
- Santicizer 711 is not a Fluids group product
- Life test not quite as good as Aroclor 1016

Assessment:

For most users should be preferable to DOP and all other currently available fluids if they must use a non-PCB material.
