SUBJECT: Asbestos Abatement -- CPD Facilities

I have reviewed the document sent to us by Frohlich and find it as good as any that I have seen. Clearly, it needs some modification to fit our situation, but it is an excellent start. I have had air sampling for fiber done in the machine shop at Travelers Rest and there were no fibers detected. However, the condition of the material does not guarantee that there could not be a problem at any time.

I suspect that the only way to apply this document to our situation is to sit down and "hammer it out." How do you want to accomplish this?
