Hazardous Substances in the Work Area

I. Criteria For Judging If A Material Is Hazardous

A material or a mixture is hazardous under the OSHA Hazard Communication Standard, and therefore, requires a Material Safety Data Sheet if:

1. The material or mixture has been tested and found to meet the health hazard criteria established in the OSHA Standard (29 CFR Part 1910.1200). Health hazards include carcinogens, corrosives, toxic materials, irritants, sensitizers and materials having target organ effects.
2. The material or mixture has been tested and found to be a physical hazard as defined by the Standard. Examples include compressed gases, explosives, oxidizers, flammables, combustibles and organic peroxides.
3. The mixture has not been tested as a whole, and any component is a carcinogen or potential carcinogen and is present at a level of 0.1% or more, including:
 - a. Any material listed in the latest edition of the NTP Annual Report on Carcinogens, the IARC (International Agency for Research on Cancer) monographs or 29 CFR 1910, Subpart Z (OSHA Carcinogens) is defined to be a carcinogen or potential carcinogen under OSHA.
 - b. Any material classified by Monsanto for labeling purposes as a carcinogen or potential carcinogen.
 - c. Any material classified by Monsanto internal procedures as a carcinogen or potential carcinogen.
4. The mixture has not been tested as a whole, and any component is listed on 29 CFR 1910, Subpart Z or the latest edition of the ACGIH TLV's, and is present at a level of 1% or more.
5. The material, a mixture, or any component of a mixture (if the mixture has not been tested as a whole) is classified by Monsanto for labeling purposes as requiring a warning statement of any type other than a good hygiene statement, and is present at 1% or greater.

6. The material, mixture, or any component of the mixture (if the mixture not been tested as a whole) is judged to be hazardous by Monsanto's Internal Hazard Evaluation Procedure. Examples at Texas City include lactonitrile and acetone cyanohydrin.
7. The mixture has not been tested as a whole and is judged by Monsanto, based on scientific literature, to be a physical hazard.

NOTE: Based on verbal communications with OSHA, a mixture for purposes of this criterion includes all components in a product, such as impurities, residual monomers in a polymer and unreacted raw materials.

Monsanto products and isolated intermediates will be evaluated by the Department of Medical and Environmental Health (DMEH). We will rely on vendors' evaluations for their products, although the Industrial Hygiene Department at each location will review these evaluations. One example worksheet for vendor evaluations is included elsewhere in this section.

II. Monsanto Hazard Evaluation Procedure

Monsanto's products will not present an unreasonable risk of harm to human life or health or to the environment when they are properly handled, transported or used. The Department of Medical and Environmental Health (DMEH) has the responsibility for judging the adequacy of data developed to insure the safety and environmental compatibility of products and intermediates produced in its own workplaces and shipped to its customers. Physical and chemical hazard assessments are also carried out by fire professionals in our Department of Safety and Property Protection units.

As one means of discharging this responsibility, DMEH undertakes specific assessments of each new chemical or proposed new use of an existing chemical. While not subjected to all features of this procedure, established products are periodically reviewed to determine that their hazardous characteristics have been adequately assessed and classified, and Material Safety Data Sheets exist containing health and safety information. Final approval of safety and environmental assessments will be given by the Director, DMEH or his designate.

LAM013029

SC

12085

Monsanto will carefully evaluate its products and chemicals for potential to harm humans and the environment. Early in a new product development project, the following will be provided to the Department of Medical and Environmental Health to initiate the preliminary assessment of safety and environmental capability:

1. Product and Chemical Name
2. CAS Number (if available)
3. Common Names and Synonyms
4. Trade Names
5. Molecular and Structural Formula
6. Molecular Weight
7. Physical Data Sheet
8. Known or Expected Impurities
9. Expected Major Areas of Use and Volume
10. Toxicity Known
11. Expected Environmental Impact from Manufacturing Process Wastes and from Product Use and Disposal

This information, along with an appropriate literature search, will be used by DMEH to assess the tests needed for the product. Part of the literature search will include a review of available data bases such as Medline, Toxline, etc. and Appendices A and B of the OSHA Hazard Communication Standard.

Upon completion of the preliminary assessment, DMEH may list additional studies deemed necessary for completion of the comprehensive assessment of safety and environmental compatibility. They may also recommend dropping a product from consideration. The list of studies initially proposed may be expanded as information is accumulated from exposure data and clinical experience to confirm or deny the toxicology studies. Monsanto may conduct various toxicology tests in its own Environmental Health Laboratory or contract these studies at outside independent qualified laboratories. When the information requested has been obtained, a decision regarding product hazard and risk will be made.

It should also be noted that some products are also evaluated under other existing laws such as FIFRA (pesticides) and FDA (Food and Drug Administration) that require some different approaches to justify agency approval.

Triethanolamine Hydrochloride	Kodak
Triethylbenzene	John Garton
Trimethylpentane, 2,2,4- (Isooctane)	JT Baker
Trisodium Phosphate, 10% w/v MO-51A	LaMarka
Triton-X	Mallinckrodt
Undecane, n-	Aldrich
Uranyl Nitrate	JT Baker
Urea	Fisher
Valeronitrile	Aldrich
Wipe-A-Way Germ Cleaner	All States Chem
Xylene, m-	Aldrich
Xylene, o-	Phillips
Xylene, p-	Aldrich
Xylene, p-	Eastman

LAM013059

Quality Assurance Lab Work Area List 11-6-85

Zep-O-Fine Deodorizer Liquid	Zep Mfg
Zepvue Glass Cleaner	Zep Mfg
Zinc Acetate	Mallinckrodt
Zinc Acetate	JT Baker
Zinc, 1000 ppm Std	Scientific Products

Quality Assurance Lab Work Area List 11-6-85

Sodium Nitroprusside	Fisher
Sodium Phosphate Dibasic	Fisher
Sodium Phosphate Dibasic	Mallinckrodt
Sodium Phosphate Heptahydrate	Kodak
Sodium Phosphate Heptahydrate	Fisher
Sodium Phosphate Monobasic	JT Baker
Sodium Phosphate Tribasic	Fisher
Sodium Potassium Tartrate	Fisher
Sodium Sulphydrate	Fisher
Sodium Sulfide	Fisher
Sodium Sulfite	JT Baker
Sodium Sulfite	Mallinckrodt
Sodium Tartrate	Fisher
Sodium Thiosulfate	Fisher
Sodium Thiosulfate	JT Baker
Sodium Thiosulfate, .100 N MO-13	LaMarKa
Sodium, 1000 ppm Std	Scientific Products
Sodium, 1000 ppm Std	Harleco
Stannous Chloride	Mallinckrodt
Starch Indicator 6 gpl MO-17	LaMarKa
Styrene Monomer	Monsanto
Sulfamic Acid	Fisher
Sulfuric Acid	JT Baker
Sulfuric Acid	Mallinckrodt
Sulfuric Acid, .020 N MO-14A	LaMarKa
Sulfuric Acid, .10 N MO-49	LaMarKa
Sulfuric Acid, .250 N MO-15	LaMarKa
Sulfuric Acid, 10% w/w MO-50	LaMarKa
Tetrabutylammonium Hydroxide in MeOH	JT Baker
Tetramethylammonium Iodide	Southwestern Analytical
Thymol Blue	Mallinckrodt
Thymol Blue Indicator .1%	LaMarKa
Thymolphthalein, .1% (EtOH) MO-25	LaMarKa
Thyodine	Fisher
Tin Metal, 20 Mesh	Fisher
Tin, 1000 ppm Std	American Scientific Prod
Tin, 1000 ppm Std	Harleco
Toilet Bowl Cleaner	
Toluene	Phillips
Toluene	Mallinckrodt
Toluene	Fisher
Trichloro-1,2,2-Trifluoroethane, 1,1,2-	Mallinckrodt
Triethanolamine Hydrochloride	Kodak
Triethylbenzene	John Garton
Trimethylpentane, 2,2,4- (Isooctane)	JT Baker
Trisodium Phosphate, 10% w/v MO-51A	LaMarKa
Triton-X	Mallinckrodt
Undecane, n-	Aldrich
Uranyl Nitrate	JT Baker
Urea	Fisher
Valeronitrile	Aldrich
Wipe-A-Way Germ Cleaner	All States Chem
Xylene, m-	Aldrich
Xylene, o-	Phillips
Xylene, p-	Aldrich
Xylene, p-	Eastman
