Re: Asbestos Removal
DuPont Plant,
Victoria, Texas

Gentlemen:

We hereby give notice that we will be removing asbestos containing insulation from the ADN Facilities at the above referenced location south of Victoria, Texas on Route FM 1686. We anticipate beginning this work on about January 9, 1984.

The area in which we will be removing such material will be roped off from the rest of the plant. Anyone entering the area will be protected by wearing approved disposable coveralls and utilizing proper respiratory protection as approved by "NIOSH".

The asbestos contaminated materials will be wet down prior to removal and, while still wet, will be placed in properly labeled 6 mil plastic bags provided by the DuPont Company. These bags will then go to a decontamination station where they will be washed down. After washing, these bags will then be placed in another 6 mil bag. This material will then be placed in closed metal containers and transported to the approved landfill on the plant site. Final disposition of the asbestos material will be carried out by E.I. DuPont de Nemours & Company.

We trust that the foregoing meets with your approval.

Very truly yours,

LEVY WRECKING COMPANY

Norman W. Ginsberg
President

cc: E.I. DuPont de Nemours & Co.

* Sump working - goes to waste disposal, wells.
