12301 Farmington Road  
Livonia, Michigan 48150

ATTN: Mr. B. Bradshaw

Dear Mr. Bradshaw:

Enclosed is our literature describing Therminol 66 which is our recommended fluid for replacing Therminol FR2.

Since your system is relatively small, I would suggest only to drain the system as well as possible and replace with Therminol 66. A chemical cleaning of the system would cost much more than a second charge of fluid at a later date.

The cost for Therminol 66 is as follows:

| <u>DRUM QTY.</u> | <u>PRICE/LB.</u> |
|------------------|------------------|
| 1 - 4            | \$ .40           |
| 5 - 39           | .38              |

Therminol 66 is shipped in 460 pound net drums (8.35 lbs./gallon) F.O.B. Anniston, Alabama.

The FR2 drained from your system can be disposed of free of charge by shipping it to:

MONSANTO COMPANY  
W.G. Krummrich Plant  
Sauget, Illinois  
ATTN: Supervisor, Dept. 246

Drum cost and freight charges should be paid by Awrey.

I will check back with you again in about two weeks. Should you have questions in the interim, do not hesitate to call.

Very truly yours,

James J. Roder
