Dave, as we have discussed a successful MCS 1016 will be substituted for Therminol FR-1 and also substituted for Aroclor 1242 in the Therminol FR Lo-Temp and FR-0 blends.

If you haven't already done so, I would suggest that fire tests be run on MCS 1016 compared to FR-1 and also blends made up and compared to FR Lo Temp and FR-0 containing A-1242. I believe we should also check fire and flash points.

After we view these results we will probably have to approach both UL and FM.

What do you think?
