To: R. M. Pearson

cc: G. K. Nichols

From: G. H. Wolcott

Subject: Raybestos Brake Lining (06-080-0408 and 06-080-03)

Subject material generates asbestos fibers and is an item involved in the Ypsilanti Plant Asbestos Control Program. It is necessary that action be initiated to replace this material by substituting a non-asbestos product.

The Safety Department has received literature and a sample of material that is being recommended by a local supplier and will work with your Department to identify an appropriate substitute product. Please advise me how you would prefer to approach this matter and if you can project some time frame for resolution.

If you think a meeting would be helpful to clarify the problem or to explore alternate approaches or solutions, we will be glad to participate.
