004436

Preliminary indications are that no existing set of regulations currently in use in the country will achieve the ambient air standards adopted for the Cincinnati Air Quality Control Region this January. There has been some talk (rumor) of emission standards on combustion like .05 gr/ft^3 and of sulfur in fuel limits like less than .3%.

Wyoming - E. F. Spencer

Although the state adopted tight regulations last December, enforcement has been spotty because of limited manpower and money (2 man staff).
