that you will hear in Mr. Wood's case is that he was exposed to asbestos dust from Ford brakes at the U.S. Post Office when he started working there in 1948.

That is all of the proof of asbestos exposure that you will hear concerning Mr. Wood.

So Ms. Hines told you in opening that she expected that the evidence would show that Mr. Wood was exposed to asbestos only while he was working at the post office.

Well, we know that is not true. How do we know that is not true?

We know that is not true from the testimony of Dr. Levine who was Mr. Wood's cancer specialist who saw him in the hospital and treated him for his mesothelioma.

We also know that Mr. Wood worked as a longshoreman because Ms. Wood told us that during her testimony.

I asked Dr. Levine, do general standard oncology textbooks refer to the occupation of longshoremen?
