This memo only!

Confirming our phone conversation of November 26, 1969:

1. Bill Richard has requested that we not dismantle the benzene extraction equipment on the basis that it may be useful in the production of a new product. By copy of this letter, I am asking Bill Richard to further define the product, its usefulness, the manufacturing process and the possibility of successful development.

2. Cuming Paton has requested that Gerry Miller supply a sample of low soluble Aroclor 5460 of the type caused by over-chlorination of terphenyl to Bill Coaker, St. Louis Research. If you have not already honored this request, please do so as soon as possible -- if Coaker determines that this material is salable, it could help to ease the very critical shortage of Aroclor 5460.

3. Please develop a cost estimate and an appropriation request for the laboratory equipment necessary to run the chlorinated biphenyl-in-Aroclor 5460 analysis.

4. We have been told to act on the assumption Aroclor 5460 will receive FDA approval and that we will be required to certify the chlorinated biphenyl content. Please get together with Hill Williams and re-affirm to me in writing where the maximum specification for chlorinated biphenyl in Aroclor 5460 should be set for the equipment capability now in existence.

W. A. KUHN
