Subject COMPLIANCE WITH EPA ASBESTOS
 REGULATION

**PLAINTIFF'S
 EXHIBIT**

UC-1124

Gentlemen:

Paragraph 61.22 (d), Subpart B-National Emission Standard for Asbestos of 40CFR61 requires that EPA be notified of any activity involving the removal of insulation or fireproofing material containing asbestos from more than 260 feet of piping or more than 160 square feet from other equipment such as ducts, boilers, tanks, reactors, turbines, furnaces and structural members.

This requirement was brought to our attention by Mr. R. A. Huber's subject letter of June 22, 1977. In his letter, Mr. Huber attached a sample notification form that seems to be an adequate format for transmitting the required information to EPA.

Dan Martin has asked me to collect notification forms from the Southern EP Coordinators for subsequent submittal to EPA. I would appreciate receiving your notification forms by September 30, 1977.

Very truly yours,

Tom Covin
