Pierre sez . . .

If it ain't one thing, it's another.

Now that we've spent 17 years and \$33 million to get rid of the lampreys in the Great Lakes, we've got another problem.

Now we're being told a lot of the fish in the Great Lakes are contaminated with PCB and we're getting warnin's about eatin' lake trout and salmon from Lake Michigan.

Now it seems that if these fish can't be harvested, all that work is down the drain.

Pierre When you come to think of it, it amounts to our left hand spendin' millions to hit the lamprey in the head while our right hand is lettin' these chemicals into the lakes.

When it comes right down to the nitty-gritty, it just doesn't make sense to keep spendin' on lampreys and then lettin' everyone pollute.

Guess I'd rather take-my chances with the lamprey. Maybe, if we tried hard enough, they might be good eatin'.

Fish loaded with PCB ain't!
