maintenance!

GARLOCK LATTICE BRAID PACKINGS

APPLICATIONS

On rotating shafts, reciprocating rods or rams, expansion joints and valve stems.

TYPES OF SERVICES

Water, oil, solvents, acids, steam, gases, etc., at temperatures up to 700° F.

AVAILABLE MATERIALS

Asbestos (Canadian or Blue African)
Asbestos—wire reinforced
Flax
Cotton
"Teflon" or asbestos with "Teflon" impregnation

AVAILABLE FORMS

Ring, coil, or reel

Every strand of LATTICE BRAID packing passes diagonally through the body of the packing to form a completely unified structure—braided internally as well as externally. This patented LATTICE BRAID method has these advantages:

1. Prevents the packings from disintegrating when subjected to wear.
2. Makes the packings flexible so they can be formed into rings without distortion.
3. Allows us to control porosity so that the right amount of liquid is absorbed for lubrication.
4. Imparts a semi-automatic action to the packings. This eliminates the need for frequent gland adjustments.

For complete information send for LATTICE BRAID Folder AD-151. Write the nearest Garlock branch or to our main office.

MARMADUKE

I got acquainted with the Frank Peeler. That afternoon Frank my plans for melting out paraffin. But I let him know that a two-man job and also that it had to be done after midnight.

"Frank was skeptical but after polished off a bottle of Sandpaper at the local bar that evening, he was with me.

"At midnight Frank and I entered Pratt's stable. We unhitched his horses and led him down the stairs to St. Mary's Presbyterian Church. Winding steps that weren't too far lead up to a belfry with a railing around it.

"We blindfolded the nag and started him up those steps. At first he balked but after Frank pulled on his halter from his bow—while I did some very good convincing from his stern—finally got the idea and arrived in good shape. But it wasn't easy.

"Next morning all hell popped. The day broke beautiful and clear. The first early riser, one Jed Kasper, passed the church on the way to his shrimp boat as he had done for years. But this morning he heard the unmistakable neighing of a horse—not from the usual direction of Joshua Pratt's stable—but from directly above the Church.

"Jed looked up, blinked his eyes, turned white as a ghost. He quickly glanced up again, as if dreading to see. Yep, there was the horse all right, looking majestic as the brilliant morning sun lighted up its red hide and mane. The horse was gazing peacefully out from the town from his noble perch, no doubt waiting for Pratt's colored boy to bring him his oats.

"Jed opened his mouth as if to say something, but no sound came out. Then, mopping the cold sweat from his brow with a red bandana, he walked slowly toward Pratt's house. He turned every few steps to look at the belfry. By golly, it was a real live horse—and it was in the church belfry.

"Before long Jed returned with the tall, lanky Pratt in tow. By then things were really buzzing. A handful of people had gathered already and there was much yelling and hollering. Everyone was staring up openmouthed. Only the horse was calm. From his unique perch he even seemed to enjoy all this hubbub.

"After Pratt blew a few fuses, slipped his lid, stripped a gear or two and beat a high-pressure gasket for good measure, he realized there was nothing to do but get that critter down. But he

LIMITORQUE

...the most widely used
AUTOMATIC VALVE OPERATOR
in the world

Thousands are in operation, day and night in many of America's Leading Central Stations and Private Power Plants, from Maine to California—and too, thousands of Limitorques are in constant use in Chemical and Process Plants; Water and Sewerage Plants; Oil Pipe Lines and Refineries—and aboard Ships.

There are many and good reasons why Limitorque is by far the most widely used Valve Operator in the World. . . . Write for Catalog and you'll be convinced.
