PROPOSED ENGINEERING STANDARD
MEASUREMENT AND CONTROL OF ASBESTOS DUST EXPOSURE

Enclosed is a partial text and outline of a proposed standard on the measurement and control of asbestos dust exposure. In view of the experience and prior work of the Construction Division in this field, it is requested that you prepare a draft covering sections 3, 4, 5 and 6 of this outline. If you find the outline or material included is unsuitable, please rearrange it as you see fit.

It is suggested that A. L. Lynch be called upon to collaborate on the draft, particularly with respect to Section 6, Asbestos Dust Sampling.

We should plan to have the completed draft reviewed by Haskell Laboratory prior to circulation to the Main Standards Committee for comment.
