

CONSTRUCTION / Part of a system that will provide more water for California, the Del Valle dam approaches completion at Livermore, near San Francisco. Heavy construction projects like this wear out a lot of powerful equipment, much of which depends on Abex controls to keep running.

Our friction control products are widely used in brakes, clutches, and transmissions. Our fluid controls provide power on the machines for lifting, digging, pushing and dumping. And our wear control alloys fight grueling impact and abrasion as components of power shovels and other machines.

On dams, highways, homes and factories, construction machinery and mobile equipment are hard at work building a better world, and Abex is working hard to produce vital controls for these machines.
