Sorry for the Delay in
Responding to this!

Is there any data or
employee "recollection" of the
noise levels in the plant?

High frequency is very common and
it is unlikely that the CI chemicals
would cause it - but - based on
8(c) criteria, if we have no
indication of high noise in the unit,
we probably would "file" this
in the 8(c) folder.

Pls return form with your comments.

Report of a Possible Adverse Effect To Health or the Environment

If you think a chemical substance or mixture has caused an adverse human effect, identify that substance and describe how affected. If you think the environment (for example, the air, water, soil, animals, or plants) has been adversely affected by one of the facility's chemical substances or mixtures, identify the substance (if known) and the affected plant and/or animal or contaminated area of the environment.

If you cannot identify the suspected chemical substance or mixture, identify the product, material, or item believed to be the cause of the adverse effect or describe the process or operation or the effluent, emission, or discharge from the facility that you think has caused the adverse effect.

AL ZULKA REPORTED TO ME THAT SOME OF
THE EMPLOYEES WHO WORKED IN THE OLD C.I.
PLANT SUFFERED A HIGH FREQUENCY HEARING
LOSS. I HAVE ATTACHED A COPY OF HIS RE-
PORT.
